The present sequence represents a non-cleavable Fas ligand 1306145 deletion mutain. Fas ligand deletion mutein can be expressed in cells transfected with the DNA (AAV32623) coding for the mutant protein. These cells, expressing the mutant Fas ligand in a non-cleavable form, are claimed to be useful in vitro to identify cells that express Fas and, in vivo or in vitro, for reducing proliferation of Fas-expressing cells. The DNA encoding the Fas ligand mutant is claimed to be useful in gene therapy procedures and for the treatment of autoimmune diseases, e.g. multiple sclerosis, erythematosus, rheumatoid arthritis, glomerulonephritis, myasthenia gravis and transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   12-NOV-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           These cells, expressing the mutant Fas ligand in a non-cleavable form, are claimed to be useful in vitro to identify cells that express Fas and, in vivo or in vitro, for reducing proliferation of Fas-expressing cells. The DNA encoding the Fas ligand mutant is claimed to be useful in gene therapy procedures and for the treatment of autoimmune diseases, e.g. multiple sclerosis, erythematosus, rheumatoid arthritis, glomerulonephritis, myasthenia gravis and transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a non-cleavable Fas ligand 1306142 deletion mutein. Fas ligand deletion mutein can be expressed in cells transfected with the DNA (AAV22622) coding for the mutant protein.
                                                                                                                                                                                                                                                     Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and have the capacity to activate a Fas receptor-mediated pathway. Claimed mutants of Fasl or an organ or tissue expressing a mutant can be used to alleviate symptoms of a disorder characterized by inadequate or inappropriate stimulation of a Fas receptor-mediated pathway, such as apoptosis, in a tissue or organ. In particular, Fasl mutants can be used to treat intolerance to a graft in a patient. The Fasl mutants protect an organ or tissue from autoimmune destruction.

Note: The present sequence is not shown in the specification but it has been derived from the wild-type Fasl sequence AAY28594 shown in the
  This sequence is Fas ligand (Fast) mutant delta 1. by deleting amino acids 126-129 (Inclusive) of the sequence AAY28594. The Fast protein activates the induces apoptosis. The Fast deletion mutants (AAY28
                                                                                                                                                                 A non-cleavable Fas ligand polypeptide Fas receptor-mediated apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fas ligand;

                                                        The present sequence is a protease-resistant Fas ligand derivative in which a region of human Fas ligand which is susceptible to protease attack has been deleted. The present invention also describes appprosis modulators containing soluble Fas ligand. The modification in the Fas ligand renders it resistant to the action of proteases such as the metalloproteinase which in vivo cleaves the active membrane-bound Fas ligand (which is active as an apoptosis inducer). The Fas ligand can be used for the prevention and treatment of diseases such as cancer, viral infection and autolimune disease, e.g. by introduction of DNA encoding the modified Fas ligand into effector cells using a suitable gene
                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 4; Page 48-49; 60pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            non-cleavable. The mutations inhibit the proteolytic cleavage of FasL and have the capacity to activate a Fas receptor-mediated pathway. Claimed mutants of FasL or an organ or tissue expressing a mutant can be used to alleviate symptoms of a disorder characterized by inadequate or inappropriate stimulation of a Fas receptor-mediated pathway, such as apoptosis, in a tissue or organ. In particular, FasL mutants can be used to treat intolerance to a graft in a pathent. The FasL mutants protect an organ or tissue from autoimmune destruction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protease-resistant Fas ligand derivatives used for prevention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (MOCH )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic.

                                                                                                 screened with a murine Fas-L probe. Isolated clones were amplified by PCR, and a desired fragment ligated into vector pBluescript SK. The cDNA insert of recombinant vector Fas-L/pBs, deposited as E. coli ATCC 69527, is given in AAQ91311. Recombinant Fas-L was
                                                                                                                                       A cDNA library prepd. from human peripheral blood lymphocyte mRNA was

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                             Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        compositions immunodeficiency virus-1 (HIV-1) group comprising an anino acid sequence selected from 51 defined anino acid sequences (ABL25347 to ABP25397). (I) has virucide activity and can be used in vaccines. (I) comay be used for immunising subjects against HIV-1 infections. The use of group-based vaccines has several advantages over traditional vaccines, compositions. There is evidence that the immune response to whole compositions. There is evidence that the immune response to whole callowing for immune escape due to mutations. The groups for inclusion in group-based vaccine may be selected from conserved regions of viral or compositions. Furthermore, immunessive groups for inclusion in group-based vaccine may be selected from conserved regions of viral or timmuna response to antigens, which therefore reduces the likelihood of cessape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to combine selected groups, achieving, for example, enhanced immunogenicity. Accordingly, the immune response can be modulated, as a propriate, for the target disease. Similar engineering of the response can be petide sequences used in the exemplification of the present convention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC The present invention describes a composition (1) comprising a prepared CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid composition acid composition acid composition acid composition acid compositions. The use of CC ABP25397). (1) has virucide activity and can be used in vaccines. (1) CC may be used for immunising subjects against HIV-1 infections. The use of CC group-based vaccines has several advantages over traditional vaccines, CC particularly when compared to the use of whole antigens in vaccine CC compositions. There is evidence that the immune response to whole antigens is directed largely toward variable regions of the antigen, CC allowing for immune escape due to mutations. The groups for inclusion in CC an group-based vaccine may be selected from conserved regions of viral or CC timuour-associated antigens, which therefore reduces the likelihood of CC escape mutants. Furthermore, immunosuppressive groups that may be present CC in whole antigens can be avoided with the use of group-based vaccines. An additional advantage of an group-based vaccine approach is the ability to combine selected groups, achieving, for example, enhanced CC immunogenicity. Accordingly, the immune response can be modulated, as CC appropriate, for the target disease. Similar engineering of the response CC represent peptide sequences used in the examplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EX S X O O O O O O O X B X B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2
                      The invention relates to a purified polypeptide having luciferase activity and a recognition site specifically cleavable by a protease, where cleavage results in a decrease in luciferase activity. The polypeptide comprises a localisation sequence which is linked to the luciferase polypeptide by the cleavable recognition sequence. The polypeptide is useful for identifying a protease (Caspase-3) activity modulator, an inhibitor of apoptosis and for detecting luciferase activity in a sample. The polypeptide is used for characterising and identifying cellular processes associated with metabolism, cell growth and cell death e.g. apoptosis and for measuring protease activity. The protease measurement methods are useful for characterising, identifying cellular biochemical pathways as well as identifying diagnostic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New purified luciferase polypeptide, useful for identifying protease activity modulators, comprises recognition site cleavable by protease, where cleavage of polypeptide results in decreased luciferase activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to the treatment of allergic conditions, comprising the administration of a pyrazole derivative. The activity of derivatives of the invention may be described as, antiallergic, antiasthmatic and dermatological. They act as cathepsin S inhibitors and may be used for the treatment of allergic conditions including atopic allergies, e.g. hay fever, asthma, atopic dermatitis, food allergies and allergies to dust, pollen, mold, pet dander or pet hair. The current sequence represents a cathepsin S inhibition assay substrate peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Unidentified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell death.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAE19118;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       biochemical pathways. The polypeptide is also useful as a substratuse study agents or conditions that cleave the recognition site and for determining amount of protease in a sample and for monitoring the activity of protease inside a cell that expresses a recombinant luciferase. The present sequence is a protease peptide used in the
          The present invention relates to a new nucleic acid construct that comprises a polynucleotide cassette encoding a chimeric polypeptide. The chimeric polypeptide comprises a first polypeptide sequence, a second polypeptide sequence translationally fused to the first sequence, and a protease recognition site (PRS) cleavable by a virally encoded protease, where cleavage of the PRS leads to a detectable signal. The nucleic acid construct of the invention is useful for uncovering molecules having antiviral activity or for determining viral drug resistance and the chimeric peptide is also useful for detecting the presence of a virus in a cell. Other uses of the invention are detecting viral encoded protease found in infected cells or detecting the presence of viral infection. The nucleic acid construct is useful for phenotypic testing of human immunodeficiency virus (HIV) drug resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human immunodeficiency virus Gag protein protease cleavage sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  08-MAY-2002
                                                                                                                                                                                                                                                                         New nucleic acid construct for detecting anti-viral drugs, comprises polynacleotide cassette encoding a chimeric polypeptide with two polypeptide sequences and—a protease recognition site cleavable by a virally encoded protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-JUL-2000; 2000US-0629969.

C
CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid corequence selected from 51 defined amino acid sequences (ABL25347 to CC ABP25397). (I) has virucide activity and can be used in vaccines. (I) CC may be used for immunising subjects against HIV-1 infections. The use of group-based vaccines has several advantages over traditional vaccines, CC particularly when compared to the use of whole antigens in vaccine cc compositions. There is evidence that the immune response to whole cantigens is directed largely toward variable regions of the antigen, CC allowing for immune escape due to mutations. The groups for inclusion in CC an group-based vaccine may be selected from conserved regions of viral or cescape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines.

CC An additional advantage of an group-based vaccine approach is the ability the

The construct is specific, sensitive and lacks background enzymatic activity in the absence of human immunodeficiency virus protease, and is suitable for detection of specific viral strain isolates even under low viral load conditions. Whe used for phenotypic testing of HIV drug resistance it delivers accurate results within 24 hours. The present amino acid sequence represents one of several (AAU75794-AAU75798) HIV Gag protein protease cleavage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human immunodeficiency virus type 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             05-OCT-1999;

The invention relates to a method of treating allergic conditions comprising administration of a composition comprising a substituted pyrazole (I) or a salt, amide or learning an accompanient of the method is used for treating allergic conditions, e.g. hay fever, asthma, atopic dermatitis and food allergies. The present sequence represents human cathepsin S substrate peptide used in an assay to demonstrate the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                          The present sequence is a peptide used as substrate for a cathepsin S inhibition assay. The km for the substrate is around to be under the presence of substrate inhibition makes kinetic analysis difficult. With 20 uM substrate, the assay rate is linear over the range of 1-8 ng cathepsin S in 100 ul reaction. Using 2 ng/well of cathepsin S, the production of product is linear and yields about 7-fold signal after 20 min with only 20% to 10ss of substrate. Primary assays are run by quenching the reaction after 20 min and then measuring the fluorescence. For other assays, measurements are taken every min for 20 min. The rate is calculated from the slope of the increase and the percent inhibition is calculated from this. The present invention relates to the use of cathepsin S inhibitors to treat an allergic condition, especially an atopic dermatitis or a food allergy such as hay fever, asthma, atopic dermatitis or a food allergy. The allergens may include dust, pollen, mould, and pet

                                                                                                                                                                 of a ricin-like protein in a novel recombinant protein. A nucleic acid (see AAT97900) encoding such a construct is obtained by PCR mutagenesis of the wild-type ricin linker sequence. The invention provides novel recombinant proteins which incorporate the A and B chains of a ricin-like toxin (preferably the A and B chains of ricin) linked by a heterologous linker sequence containing a ricin linked by a heterologous linker sequence containing a roteleavage recognition site for a retroviral protease such as HIV protease (see AAM36880-82), HTLV-I (see AAM36883-43) or HTLV-II (see AAW36885-65). The recombinant proteins selectively inhibit or destroy mammalian cells infected with a retrovirus such as cancer cells associated with HTLV or cells associated with HTLV. The recombinant proteins are non-toxic until the ricin A chain is liberated from the B chain by a retroviral protease, and thus can be used to specifically target infected cells without the need

                                                                                                                                                                                                                                                                                                   The present invention describes a composition (1) comprising a prepared CC human immunodeficiency virus-1 (HIV-1) group comprising an amino acid companies as elected from 51 defined amino acid sequences (BHI25347 to CC ABP23397). (I) has virucide activity and can be used in vaccines. (I) cmay be used for immunising subjects against HIV-1 infections. The use of CC group-based vaccines has several advantages over traditional vaccines. (CC particularly when compared to the use of whole antigens in vaccine CC compositions. There is evidence that the immune response to whole CC antigens is directed largely toward variable regions of the antigen in CC allowing for immune escape due to mutations. The groups for inclusion in CC tumour-associated antigens, which therefore reduces the likelihood of CC tumour-associated antigens, which therefore reduces the likelihood of CC escape mutants. Furthermore, immunosuppressive groups that may be present CC in whole antigens can be avoided with the use of group-based vaccines. (CC and additional advantage of an group-based vaccine approach is the ability CC composition of the groups (CTL and HTL), and further, to modify the CC composition of the groups, achieving, for example, enhanced CC immunogenicity. Accordingly, the immune response can be modulated, as appropriate, for the target disease. Similar engineering of the response CC invention.

                                                                                                                                                                                                                                                                                                                                                           The present invention describes a composition (I) comprising a prepared CC human immunodeficiency virus-I (HIV-I) group comprising an amino acid companies and composition and acid composition acid companies are companied in vaccines. (I) CC abp25397). (I) has virucide activity and can be used in vaccines. (I) CC may be used for immunising subjects against HIV-I infections. The use of group-based vaccines has several advantages over traditional vaccines, cc particularly when compared to the use of whole antigens in vaccine CC compositions. There is evidence that the immune response to whole compositions of the antigen, and in a directed largely toward variable regions of the antigen, cc antigens is directed largely toward variable regions of the antigen, cc allowing for immune escape due to mutations. The groups for inclusion in cc an group-based vaccine may be selected from conserved regions of viral or cc an agroup-based vaccines the likelihood of cescape mutants. Furthermore, immunosuppressive groups that may be present in whole antigens can be avoided with the use of group-based vaccines. CC an additional advantage of an group-based vaccine approach is the ability composition of the groups (CTL and HTL), and further, to modify the cc composition of the groups, achieving, for example, enhanced composition of the groups, achieving, for example, enhanced composible with traditional approaches. ABP11501 to ABP5412 createsent neartific action of the response can be modulated, as a proposition of the capen and the propose can be modulated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sette A,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequences given in AAR25632-38 are peptides which are hydrolysed.

C by aspartyl proteinase (AP) in the assay of the invention. These peptides have labelled C-terminal portions which are polar. These portions are separated from the unlabelled hydrophobic w-terminal portions by hydrolysis by AP. Following hydrolysis of these peptides with AP, the hydolysed polar portion is separated from the unhydrolysed polypetide and the amount of hydrolysed polypeptide determined. This assay can be used to detect inhibitors of AP with potential as therapeutic agents, eg. for treating AIDS. This assay has a higher sensitivity than previous methods.

(Note: Revised entry submitted to correct the patent number format of US Government-owned NTIS applications to prevent classes with ongoing US granted patent numbers. For further information please visit the Derwent we web site at www.derwent.com/dwpi/updates/ntis_us.html.)

These chimeric peptides may then be used in the production of HIV-1 vaccines. These peptides sequences may also be used in the production of multimeric peptides in which the linear peptides are C-terminally modified by the addition of a Lys residue which is modified on its epsilon amino acid to carry an additional copy of the peptide molecule. The linear and multimeric peptides may be used for the treatment of AIDS by acting to displace the binding of HIV virus to human or animal cells or by disturbing the 3D organisation of the virus.
                                                                                  Chong

The T-cell epitope sequence is pref. selected from the T-helper determinant core peptides P24E, P24N, P24L, P24M and P24H while the B-cell epitopes are derived from HIV strains including CTLB-56, V3MN, CTLB-29, CTLB-55, SF2, LAI, IIIB, RF, Z6, 2054, 1714 and BX08. The peptides are chimaeric and can be linked to a branched Lys backbone. This sequence represents the T-helper determinant core peptide P24M.
      Sequence
                                                   The invention relates to a novel immunogenic composition for use in vaccines for the treatment of HIV-1 comprising an HIV-1-derived T-cell epitope linked to an HIV-1-derived B-cell epitope. The T-cell epitopes are generally designed based on the p24 core protein and the B-cell epitopes from the V3 loop of the gp120 protein from various HIV-1 strains. This peptide is a T-cell epitope derived from the HIV-1 strain MN p24 core protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 1998-556461/47.
